Abstract (en)  
[origin: WO2019166059A1] The invention relates to a shelf (1), which comprises a front side (4), a rear side (5), two side sections (6, 7) which are opposite one another, and a top side (2), wherein the top side (2) forms at least one contact plane (8) for goods. On the shelf (1), a pull-out device (9) is associated with the side sections (6, 7), said pull-out device (9) having at least one, preferably two, coupling points (15, 16) for fastening to a carrier structure (100) and further being configured such that the shelf (1) executes a linear pull-out movement that extends at an angle of inclination (a) with respect to the upper side (2) of the shelf and diverges from the front side (4) to the rear side (5). The invention further comprises a shelf arrangement and a shelving system.
