Abstract (en)
[origin: WO2019166422A1] The invention relates to a tank, in particular a fuel tank, for receiving a fluid in a motor vehicle, comprising an outer wall forming an internal space for receiving the fluid, at least one volume element arranged in the internal space for receiving gas, in particular air, and an opening, in particular a gas-guiding line between the volume element and the environment of the tank for changing the volume of the volume element, wherein the at least one volume element is formed at least partially as bellows.
