Abstract (en)

[origin: WO2019166496A1] The invention relates to a floating board (2) consisting of a material which can float on water, having a support region (8) on which a user at least partially lies. In order to reduce the flow forces which act on the user while he or she holds onto a motorized watercraft (24) and is pulled behind the latter, it is proposed that the floating board (2) has, at a front end region, a fastening portion (22) for fastening the floating board (2) to the watercraft (24) in an articulated manner.
