Abstract (en)
[origin: WO2019201584A1] The invention relates to a transport container (10, 10') with a base (14) and lateral walls (18) which extend from the base (14) to a container upper face (16) and which border a container interior (22) in an annular manner, comprising a separator (24) which is received in the container interior (22) in a removable manner. The separator has interconnected separating walls (26) which extend from the base (14) to the container upper face (16), delimit compartments (28), and are made of a flexible web material. Securing elements (32) for releasably securing to the lateral walls (18) are secured to the separating walls (26). Each of the securing elements (32) has an engagement part (40), and the lateral walls (18) have receiving area interiors (34) which are open at the edge towards the container upper face (16) and in which a respective engagement part of the engagement parts (40) is received.
