Abstract (en)  
[origin: WO2019167014A1] The subject of the invention is an airlock with a pneumatic orifice, characterized in that the orifice chamber (5) is located inside the tunnel (1), together with an inactive expansion element (4) made up of a flexible material consisting of an external torus (6) and an internal membrane (7), which is activated by compressed air produced by compressors (10) placed in a housing (5).
