Abstract (en)

A profile fixing accessory for mounting panels or covering elements of a cladding, elevated floor or lowered ceiling to elongated profiles, comprising a lock element and a key element, i) the lock element defining two parallel and spaced apart toothed sections extending in a Y-direction, both toothed sections joined to one another by a flexible link configured to allow relative movement of both toothed sections versus one another in the Y-direction and an X-direction perpendicular to said Y-direction; ii) the key element defining a wedge configured to cooperate with said lock for limiting the relative movement between the toothed sections in the X-direction.
