Abstract (en)

[origin: WO2019170271A1] A cutting tool (100) includes a first lever (110) and a second lever (120). The cutting tool (100) includes a first cutting edge (202) defined by the first lever (110). The cutting tool (100) includes a second cutting edge (206) defined by the first lever (110). The cutting tool (100) includes a third cutting edge (208) defined by the second lever (120) such that the first cutting edge (202) and the third cutting edge (208) accept a material to be cut by moving the first lever (110) and the second lever (120) by a first angle (α). The cutting tool (100) includes a support surface (150) defined by the second lever (120) such that the second cutting edge (206) and the support surface (150) accept a material to be cut between the second cutting edge (206) and the support surface (150) by a second angle (β), wherein the second angle (β) is smaller than the first angle (α). The cutting tool (100) is characterized in that the support surface (150) is an anvil shear type surface.
