Abstract (en)
[origin: WO2019172795A1] The handle package and the packaging procedure of the kindling wood, belong to the field of packaging subjects into individual compartments. The handle package (10), in which compressed kindling wood (4) is packed, is roller-shaped. It weighs 2 to 3.5 kilograms. It is transported using the handle (3) that juts out from the base of the roller of compressed kindling wood (4). The handle package (10) consists of the bottom (1) that envelops one end of compressed roller-shaped wood (4), upper ring (2) which is put on the wrapper of the roller from the other end of the kindling wood (4) and handle (3) which is pressed in in wood (4) in the axis of the handle package (10). Handle (3) for carrying the handle package (10) is loop-shaped and juts out of the end of the wood (4) where the ring (2) is put. Bottom (1), ring (2) and handle (3) are made of recycled paper. When the wood (4) is used up, all parts of the handle package (10) can be recycled again. The procedure takes place in the tool (5), which is made of the jaw (5a, 5b) shaped as pliers, in which wood - (4) is put together and compressed together with the - free ends of the handle (3). On one end of compressed wood (4) bottom (1) is put on, and ring (2) is put on the other end. The handle package (10),, formed in above mentioned manner, is suitable for usage and transport.
