Abstract (en)

[origin: WO2019170819A1] The invention discloses, amongst other things, a method (200) comprising: detecting at least one item of sensor information (210), wherein the at least one item of sensor information is detected by at least one sensor; determining an item of evaluation information (220) which is indicative of a state of a treatment chamber of a domestic appliance (300), wherein the item of evaluation information is determined at least partly on the basis of the detected item of sensor information; and outputting or prompting the output of the item of evaluation information (230) determined. The invention further discloses an apparatus for carrying out and/or controlling this method, and a system comprising at least one apparatus and at least one domestic appliance for controlling and/or carrying out this method.
