Abstract (en)
[origin: WO2019170822A1] The invention discloses, amongst other things, an apparatus (100) for use in a domestic appliance (300), the apparatus (100) having: at least one housing (104), wherein the housing (104) is designed to be positioned in a treatment chamber (310) of a domestic appliance (300); wherein the housing (104) has: at least one discharge module (110) which is designed to dispense at least one preparation into the treatment chamber (310) of the domestic appliance (300) and/or to trigger a discharge; and at least one sensor module (112) which is designed to determine an item of sensor information which is characteristic of the state of the treatment chamber (310) of the domestic appliance (300) and/or of the apparatus (100); wherein the sensor module (112) comprises at least one acceleration sensor (115b), wherein at least part of the item of sensor information represents an item of information which is ascertained by means of the at least one acceleration sensor (115b); and wherein the at least one discharge module (110) dispenses and/or triggers the discharge of the preparation at least partly on the basis of the item of sensor information.
