Abstract (en)
[origin: WO2019170770A1] The invention relates to an assembly (3), comprising a high-pressure pump (5) and a control device (7) arranged upstream of the high-pressure pump, the assembly (3) having a fuel channel (29), which is formed between an inflow side of the control device (7) and a pump element of the high-pressure pump (5), characterized in that the assembly (3) also has, in addition to the control device (7), a safety device (33) which, when actuated, allows a cross-section of the fuel channel (29) through which flow is currently possible to be reduced.
