Abstract (en)
[origin: WO2019170216A1] The invention relates to an automotive variable mechanical lubricant pump (10) for providing pressurized lubricant for an internal combustion engine (12), comprising a lubricant delivery port (22) for being fluidically connected to the engine (12), a pump rotor (32) with numerous slidable vanes (36) rotating in a shiftable control ring (34) which is provided shiftable between a maximum eccentricity position and a minimum eccentricity position within a pumping chamber (23), a control ring preload spring (40) for pushing the control ring (34) into the maximum eccentricity position, a single hydraulic control chamber (42) for pushing the control ring (34) into the minimum eccentricity position, a gallery pressure pump port (24) for being fluidically connected to the engine (12), the hydraulic control chamber (42) being charged with the gallery pressure (PG) from the gallery pressure pump port (24) for controlling the remote gallery pressure (PG) of the engine (12) via the control chamber pressure (PC) in the control chamber (42), and an integrated overpressure valve (70) in fluidic association with the lubricant delivery port (22), the overpressure valve (70) opening to if the applied lubricant pressure exceeds a maximum pressure limit (PL).
