Abstract (en)

[origin: WO2019171115A1] A method for controlling operations of a mechanical device and a method and device for determining the reliability of data are provided, wherein the method for determining the reliability of data comprises: receiving input data; determining, from a data area of training data, a data area corresponding to the input data; and determining the reliability of the output data on the basis of the data distribution feature of the data area corresponding to the input data. The present disclosure solves the problem that the reliability of the control parameter of the mechanical device be determined in the related art, having the beneficial effect that the reliability of the control parameter of the mechanical device can be determined.
