Abstract (en)

[origin: EP3763598A1] Provided are a centralized train dispatch control system and a control method thereof. The system comprises: a railway terminal for controlling a traffic operation; an electricity maintenance terminal for providing control of station electricity maintenance; and a railway management terminal for providing management control of station information data. The railway terminal, the electricity maintenance terminal, and the railway management terminal of the present disclosure are designed, according to a station control function, to perform distributed operations, so as to improve execution efficiency. A special signalling format has also been designed to control mode switching between the railway terminal and a dispatch center, thereby improving efficiency and accuracy when switching control modes.
