Abstract (en)
Disclosed are a panel structure of an air conditioner, and an air conditioner, belonging to the technical field of air conditioners, and solving the problems of a greater speed of air being directly blown by an existing air conditioner and a poorer user experience effect. The panel structure of the air conditioner comprises an air guide plate (1) and a vertical swing blade assembly (2), wherein the air guide plate (1) is provided with a first microporous structure (11) penetrating through a thickness direction of the air guide plate, and swings up and down under the drive of an air guide plate electric motor; the vertical swing blade assembly (2) comprises a swing rod (21) and one or more vertical swing blades (22) of a bionic leaf structure; the vertical swing blades (22) are arranged on the swing rod (21); the swing rod (21) drives the vertical swing blades (22), under the driving of a swing rod drive electric motor, to swing to the left and to the right; and each vertical swing blade (22) is provided with a second microporous structure (221) penetrating through the thickness direction of the vertical swing blade.
