Abstract (en)  
[origin: EP3764015A1] A panel structure of an air conditioner and the air conditioner, relating to the technical field of air conditioners. The problems that the panel structure of an existing air conditioner has inadequate strength and is easily deformed are solved. The panel structure of the air conditioner comprises: air guiding plates (1), a vertical swinging blade assembly (2) and a panel body (3). The air guiding plates (1) are provided with first micropore structures (11) penetrating through thickness directions of the air guiding plates, and the air guiding plates are driven by an air guiding plate motor to swing up and down. The vertical swinging blade assembly (2) comprises a swinging rod (21) and one or more vertical swinging blades (22) of bionic leaf structures, wherein the vertical swinging blades (22) are provided on the swinging rod (21), the swinging rod (21) is driven by a swinging rod drive motor to drive the vertical swinging blades (22) to swing leftwards and rightwards, and the vertical swinging blades (22) are provided with second micropore structures (221) penetrating through thickness directions of the vertical swinging blades. The panel body (3) is provided with reinforcing ribs (31).
