Abstract (en)
[origin: WO2019178167A1] According to an aspect of an embodiment, a computer-implemented method of delivering information-enabled personalized health care with respect to early Alzheimer's disease in a clinical, non-research setting, comprising a social network, may include capturing one or more data streams where each of the data streams relates to health care of a patient, wherein the one of the data streams is captured from testing for certain genetic variations including single-nucleotide polymorphisms (SNPs). The method may further include integrating the data streams to generate integrated diagnostic data and analyzing the integrated diagnostic data to generate analyzed diagnostic data. The method may further include curating the analyzed diagnostic data and generating an integrated report for presentation to a physician of the patient based on the curated analyzed diagnostic data.
