Abstract (en)

[origin: WO2019206921A1] The invention relates to a method for producing a powder comprising at least one polymer for use in a method for additive production of a three-dimensional object. Said method comprising the step of mechanically treating the powder in a mixer having at least one rotating mixing blade element, wherein the powder is exposed to a temperature TB, wherein TB is at least 30 ° c and below the melting point Tm of the polymer (determined in accordance with DIN EN ISO 11357) if the polymer is a partially crystalline polymer, or wherein TB is at least 30 ° C and is at most 50 ° C above the glass transition temperature Tg of the polymer (determined according to DIN EN ISO 11357) if the polymer is a fusible amorphous polymer. Compared to a point in time before the start of the treatment, the bulk density of the powder can be increased by at least 10% after the treatment (or in the case of polymer, copolymer or polymer blends of polyamide, it is increased by at least 2% and more) and the BET surface area of the powder is reduced by at least 10%, and optionally the pourability is improved by at least 10%.
