Abstract (en)

[origin: CA3089451A1] The invention relates to a flow reducer (10) for a pressurized product dispenser of the type provided with a valve (30) equipped with a stem (20) having at least a first channel, and with a diffuser. According to the invention, the flow reducer (10) is a part separate from the stem and from the diffuser and comprises - a recess open on one side via an opening and able to be fitted by the opening over the stem (20) of a valve (30), - one or more first outlet orifices (134) which, when the reducer is mounted on the stem (20) of a valve, are able to be connected in a sealed manner to the first channel of the stem (20) of the valve while forming an extension (133) of the first channel, the outer face of the reducer, on the side opposite to the opening of the recess, having in part a contour substantially identical to that of the part of the stem (20) projecting from the valve that is intended to be covered by the reducer.
