Abstract (en)

[origin: WO2019177763A1] Container (10) including a base (18) and an outer wall (12) defining an interior space receivable of a bag (16). A bag handling assembly (26) is coupled to the wall (12) and includes a retainer (28) connected to the wall (12), a bag support (44) pivotally coupled to the retainer (28) by cooperating hinge components (36, 46) on the retainer (28) and bag support (44), and a closure component (60) pivotally coupled to the bag support (44) by cooperating hinge components (58, 62) on the bag support (44) and closure component (60), independent of the pivotal coupling of the bag support (44) to the retainer (28). The container (10) includes two separate and independent pivotal attachment mechanisms, one of which serves to fix a bag (16) between the closure component (60) and bag support (44) and the other of which serves to enable better access to the interior of the container (10) for bag insertion and removal..
