Abstract (en)

[origin: WO2019175191A1] Bearing device (1) for a roll (3) of web-type starting material, such as roll corrugated board or paper, for drawing off the starting material from the outer side of the roll for a further-processing device, such as a forming device for converting the web-type starting material into a three-dimensional padding material, a severing device for severing portions from the web-type starting material and/or a conveying device for conveying the web-type starting material from the outer side (31) of the roll (3), wherein there is provided a rigid receptacle (5) for supporting the roll having at least one rubbing contact surface (51) for providing a sliding friction contact with respect to the outer side (31) of the roll (3) when unrolling the starting material to the further-processing device.
