Abstract (en)

[origin: WO2019175856A1] Motorized closure device (10) for vehicle doors, comprising: a gear motor (12) provided with a drive shaft (44); a movable striker (14) associated with the drive shaft (44) by means of a motion transmitting assembly (16); a guide element (74) attached to the housing (12a) of the gear motor (12) and adapted to guide sliding of the movable striker (14) between a first rear position, corresponding to a configuration of door closing, and a second forward position, corresponding to a configuration of door opening, wherein the motion transmitting assembly (16) comprises an oscillating lever (54) cooperating with the guide element (74) and with the movable striker (14) for causing the movable striker (14) to make a rectilinear movement when shifting from said first to said second position and vice versa.
