Abstract (en)

The invention relates to a sonotrode for high-temperature application in ultrasonic atomization of metals and their alloys, characterized in that it includes:a body (1) made of a material having a thermal conductivity greater than  $150 \text{ W} / \text{m}^{\text{<sup>°</sup>} \text{K}}$ , and a core (2), constituting a high-temperature tip of the sonotrode, made of a material having a melting point or thermal decomposition temperature of at least  $1200^{\circ}\text{C}$ ,wherein the body (2) and the core (1) are connected mechanically or by diffusion or by both methods combined.
