Abstract (en)
[origin: EP3767034A1] Noise barrier and method for producing the same. The noise barrier (9) comprises at least one noise element (1), which has a frame and a noise cancellation structure attached to the frame. The noise element is supported between pillars (10). The frame of the noise element is produced from wood planks and comprises a horizontal frame (13) and a vertical frame (30). An outer surface of the noise element has on the side of a first flank (2a) a cladding damper (5) provided with perforations (20). Spaces defined between the horizontal frame (13) and the vertical frame (30) are each provided with a layer of sound insulating wool (15). Furthermore, the outer surface of the noise element (1), on the side of a second flank (2b), has an outer cladding panel (12).
