Abstract (en)

The present invention relates to a refrigerator and a control method therefor. A refrigerator according to the present invention is configured such that a drawer is opened by an opening/closing motor operating by inputting a manipulation of a user and a lifting unit is elevated by a lifting motor, and then the opening/closing motor is again operated, thereby allowing the drawer to be normally closed. After the drawer is normally closed, the opening/closing motor is further operated in a closed direction of the drawer to close the drawer once more. Thus, slight-opening of the drawer is prevented.
