Abstract (en)

A switching device (1) has a housing-mounted contact (6), a movable contact (4), and a switch lock (2) with a latch (20), a latch support (22) and a latching location, wherein the switching device (1) furthermore has a switching lever (7) and a connecting rod (10) is mounted movably on the latch support (22), the connecting rod (10) comprises an end portion bearing against a first projection (11) of the switching lever (7) when the switching lever (7) is arranged in a stationary ON-position, the connecting rod (10) further comprises an actuating shoulder (29) bearing against a second projection (30) of the switching lever (7) when the hand switching lever (7) is in a non-stationary ON-position, with an actuation of the switching lever (7) for separating the contacts (4, 6) moves the connecting rod (10) and thereby releases the latching of the latching support (22) to the latch (20).
