Abstract (en)

[origin: WO2019180613A1] A part of a mold (1) for ceramic articles, comprising at least one porous resin portion (9), and at least one supporting tube (8) rigidly connected to the resin portion (9); the supporting tube (8) comprising a first portion (10), provided with at least one main through duct (12), for the supply of service fluids through the resin portion (9), and a second portion (11) at least partially embedded in the resin portion (9). The second portion (11) comprises at least one distribution chamber (14) of service fluids, communicating with the main duct (12) and provided with a plurality of holes (26a, 26b) for the delivery of the fluids through the resin portion (9).
