Abstract (en)  
[origin: CA3094000A1] The invention relates to a knitted garment (1) with three-dimensional textile shaping for body curves (2, 2', 2''). The aim with this type of knitted garment (1) is to achieve an optimal three-dimensional textile shaping with a large volume, where the knitted fabric neatly fits around even large volumes and visual breaks of the fit of the knitted fabric to the body are avoided. To this end, the three-dimensional textile shaping of the knitted part (5, 6) fitting around the body curve (2, 2', 2'') or body curves (2, 2', 2'') is achieved by: increasing, in the region of a body curve (2, 2', 2''), in the knitted part (5, 6) covering said body curve, the number of stitches on the outer side of the knitted-fabric central piece predetermined on the basis of the body measurements, said increase extending for a plurality of rows of knitting, depending on the curve; then maintaining the number of stitches; and then decreasing the number of stitches, again on the outer side of the predetermined knitted-fabric central piece, wherein the knitting process is continuous without being temporarily interrupted for individual rows of stitches, as is the case when using a gusset technique or wedge-shaping technique.
