Abstract (en)
[origin: WO2019180121A1] The present invention relates to a room partitioning device comprising a first facing (520) and a second facing (521) of sheet metal secured at their periphery on either side of a frame, at least one opening (53) extending through the facings (520, 521), said opening (53) being shut off by at least one at least partly translucent or transparent panel (54), the panel (54) being accommodated between the first facing (520) and the second facing (521), characterized in that at least either the first facing (520) or the second facing (521) comprises an inner edge (58) delimiting the opening (23), at least one of the inner edges (58) being folded towards the inside of the partitioning device.
