Abstract (en)

[origin: WO2019179723A1] The invention relates to a scroll compressor (10) with a housing composed of multiple sub-housings (12, 14, 16), comprising - a motor sub-housing (12) which is equipped with a drive motor with a stator (20) fixed to the housing and a coaxial rotor (22) which is fixed to a main shaft (24) mounted on one side of the stator (20) by means of a first main shaft bearing (26), - a bearing sub-housing (14) that adjoins the motor sub-housing (12) on the side facing away from the first main shaft bearing (26) and has a second main shaft bearing (28) and an orbital guide (34) of a first scroll-type displacement device (32), which is eccentrically connected to the main shaft (24) and orbits during a rotation of the main shaft and into which a second scroll-type displacement device (36) fixed to the housing engages axially, and - a housing cover (16) which adjoins the bearing sub-housing (14) and terminates the housing. The invention is characterized in that the second scroll-type displacement device (32) is directly connected to the bearing sub-housing (14).
