Abstract (en)
[origin: WO2019179601A1] The invention inter alia relates to a method, performed by a first apparatus, for positioning or assisting in positioning said first apparatus, said method comprising: obtaining multiple original identifiers identifying respective first radio networks or nodes thereof; generating, for each of at least two of said original identifiers, from a respective original identifier a shortened identifier being representative of said respective original identifier and having a smaller size than said respective original identifier; and providing said shortened identifiers over a second radio network for positioning or assisting in positioning said first apparatus
