Abstract (en)

An apparatus for washing containers for fluids (2) comprises at least one rotary plate (5), rotatable around a first vertical axis x, and a cleaning element (7, 11) to clean a container for fluids (2) by means of friction, where said cleaning element (7, 11) is movable between a passive position, transversely retracted with respect to the rotary plate (5), and an active position, in contact with the container for fluids (2), and is likewise movable reciprocally in a direction parallel to the first vertical axis x, avoiding rotating on its own axis.
