Abstract (en)

[origin: CN112309740A] A fixing module is for fixing a push button or emergency stop button or rotary actuator of a control and signaling device. In an embodiment, the fixing module is constructed from a top housing part (1) and a bottom housing part (2), each including a cuboidal structure with a top side (3), an underside (4) and four side parts (5, 6, 7, 8) connecting the top side (3) to the underside (4). In at least one embodiment, on the top side (3) of the bottom housing part (2), a material that extends at least partially in this plane and has a grounding function is formed or an electrically conductive component made of metal with a grounding function is arranged.
