Abstract (en)

[origin: CN214325086U] The utility model relates to an arrangement for high-frequency equipotential connection, which is arranged between an antenna in or on a bogie of a railway vehicle and a vehicle body of the railway vehicle, and the equipotential connection is realized by means of a series resonance circuit. The series resonant circuit is tuned with respect to a carrier frequency used for signal transmission by means of the antenna. The utility model further relates to a railway vehicle which is provided with the arrangement for high-frequency equipotential connection.
