Abstract (en)
[origin: EP3772434A1] A rear load carrier (1) for mounting on a motor vehiclehaving a carrier frame (2) with a connection device (3) comprising a basic body (8),an upper and a lower clamping element (10, 11) displaceable relative to one another, andan actuating device (23) coupled to the clamping elements (10, 11) in order to displace them relative to one another between an insertion position and a holding position.The connection device comprises a guiding element (18) for guiding the upper clamping element (10), which is coupled to the actuating device (23) such that it can be displaced towards or away from the lower clamping element (11), wherein spring means (20) are provided between the upper clamping element (10) and the guiding element (18) so that the upper clamping element (10) can be displaced relative to the guiding element (18) against the restoring force of the spring means (20).
