Abstract (en)

[origin: WO2019185078A2] The invention relates to a bale breaker (4) for a bale (5) of bedding and/or forage (S), comprising distribution devices (6) for the latter, a bale receiving base (7) and transport devices (8) associated therewith and designed to break bedding and/or forage (S) out of a bale (5) and to transport said bedding and/or forage to the distribution devices (6) connected downstream of the bale receiving base (7) in the transport direction of the transport devices (8). Also provided is a bale lifter (H), located and designed to lift up or tilt a bale (5) of bedding and/or forage (S), lying on the bale receiving base (7), to or towards the distribution devices (6) for the bedding and/or forage. The invention also relates to a bale breaking method, wherein a bale (5) of bedding and/or forage (S) is fed to distribution devices (6) by means of transport devices (8), and during the bale breaking method, at least the end of the bale (5) of bedding and/or forage (S) facing away from the distribution devices (6) is manually or automatically raised and lowered by means of a bale lifter (H).
