Abstract (en)

[origin: WO2019197463A1] The invention relates to a method for the provision and conservation of communal meals, in which a plurality of foodstuffs and meal components are brought into packaging units and sealed therein following the preparation of said food by heating, at a temperature of at least 75°C. To cool the sealed packaging units, a water bath at a temperature of less than 3°C is used in order to bring the meal components from a core temperature of 65°C or higher to a core temperature of 3°C or lower, within no more than 90 minutes. In preferred embodiments, the invention additionally relates to methods for regenerating the cooled packaging units for consumption, in a water bath at a temperature of 80°-90°C.
