Abstract (en)
[origin: WO2019197206A1] The invention relates to a separating device (2), which can be connected to a vacuuming device (1) in order to separate dirt particles from an air flow (LS) suctioned by the vacuuming device (1), said separating device containing at least one separator (21, 22). The at least one separator (21, 22) contains an inlet opening (23) for the air flow (LS) and a first and a second outlet opening (21c, 22c), the first outlet opening (21c, 22c) being used for the exit of suctioned dirt particles from the separator (21, 22) and the second outlet opening (21d, 22d) being used for the exit of the suctioned air flow (LS) and the suctioned dirt particles from the separator (21, 22), and a first and a second collecting store (12, 13, 14, 15) for collecting the dirt particles separated from the separator (21, 22) being contained, and the first collecting store (12, 14) being positioned below the first outlet opening (21c, 22c) in a direction (B) and the second collecting store (13, 15) being positioned below the second outlet opening (21d, 22d) in a direction (B).
