Abstract (en)

[origin: WO2019197363A1] The invention relates to a retaining assembly for an electrostatic atomizer, in particular a rotary atomizer, comprising a coupling having a first and second coupling plate (8, 10) via which fluid and power lines can be coupled and decoupled for supplying the atomiser. In order to make this assembly robust and maintenance-friendly, according to the invention, a central connector assembly (16) is provided having two complementarily designed central connector elements, position fixing means formed between coupling plates (8, 10), and a coupling element in the form of a pulling means for coupling and decoupling the coupling plates (8, 10).
