Abstract (en)
[origin: WO2019198055A2] A lid for a container for storing a smokeless tobacco product includes a laterally-extending wall having opposing first and second surfaces and defining a periphery. The wall has a central axis extending perpendicularly to the first and second surfaces. A sidewall extends from the second surface substantially parallel to the central axis and about the periphery of the wall, with the wall and the sidewall being formed of a polymeric material. The lid also includes a metallic cladding engaged with the wall so as to extend laterally across the first surface.
