Abstract (en)

[origin: WO2019197778A1] The invention relates to an envelope-type flexible shipping pouch (1), which comprises an inner pouch (2) defining a compartment (6) for receiving an item (16), an outer pouch (3) incorporating the inner pouch, and an opening (5) arranged on the inner and outer pouches in order to access the compartment. The inner pouch and the outer pouch are secured together so as to define an inflatable chamber (4) around said inner pouch. The pouch comprises a channel (10) extending into the chamber, the channel including an outlet (10b) opening into the chamber and an inlet (10a) opening onto the pouch. The channel (10) extends in the lengthwise direction of the pouch and is implemented directly between a face of the outer pouch and a face of the inner pouch.
