Abstract (en)

[origin: WO2019185417A1] The invention relates to a fastening support which enables an opening and closing device to be incorporated in a conventional lock, made up of a base structure (1) comprising a tightening system which, when compressed, deforms the base structure (1) on the projection of the lock cylinder (8) with respect to the surface of the door, by means of the walls of the opening (1.4) and fastening elements with grooves (5) inserted into holes (1.3) of the very base structure (1), without needing to perform perforations or mechanising operations in any element.
