Abstract (en)  
[origin: WO2019185281A1] The invention relates to a handle device (1) for a movable part, in particular a door or a hatch, of a vehicle, comprising a handle part (10), which in particular is fixed, for actuating the movable part, and a carrier element (20) for fastening the handle part (10) to the movable part, wherein a lock cylinder (23) for unlocking the movable part at least in an emergency situation can be arranged on the carrier element (20). A reinforcement element (13) is provided on the handle part (10), in which reinforcement element the lock cylinder (23) can be received at least in part, and a fastening unit (30) is provided between the handle part (10) and the reinforcement element (13) in order to fasten the reinforcement element (13) to the handle part (10) in an interlocking and/or frictionally engaged manner.
