Abstract (en)
[origin: WO2019185835A1] The invention relates to a torsion-damping device for a vehicle transmission chain, comprising a first rotating element (5) and a second rotating element (6) which can be rotatably moved in relation to each other about an axis against a spring (4) intervening circumferentially thereinbetween, a seat (9) being arranged on one end of the spring (4), said seat (9) comprising a first axial guidance arrangement providing axial guidance between the first rotating element (5) and the seat (9), and a second axial guidance arrangement providing axial guidance between the second rotating element (6) and the seat (9).
