Abstract (en)

[origin: WO2019185206A1] The invention relates to a household appliance, in particular a household refrigerator (1), comprising a receiving space (3, 4, 8, 9), in particular for foodstuff, which is delimited by walls (17, 23) of the household appliance, and comprising a backing part (32) which is mounted on an outer side (19) of one of said walls (17, 23), said outer side facing away from the receiving space (3, 4, 8, 9), wherein the backing part (32) has a coupling element which, when the backing part (32) is mounted on the outer side (19), is coupled to a counter-coupling element which is on the outer side (19), characterised in that the counter-coupling element is designed as a raised cup (28, 29) without holes, and the coupling element is designed as a receptacle (35, 36) through which the cup (28, 29) extends in the mounted state. The invention also relates to a method.
