Abstract (en)
[origin: WO2019192697A1] The invention relates to a device for actuating a circuit-breaker (1), comprising a handle input module (2) for introducing an input movement, wherein, according to the invention, said device is for operating a circuit-breaker as individually as possible according to its installation situation and operating mode, characterised in that a deflection module (2) for deflecting the input movement and an output module (4) for transmitting the input movement to a circuit-breaker (1) are provided.
