Abstract (en)
[origin: WO2019192858A1] The subject matter of the invention is a connection element (100) for connecting an insulated electrical conductor (10), comprising a clamping sleeve body (13), in which a receiving space (14) for the electrical conductor (10) is formed, and a connection screw (15) which has a screw head (16) and a screw shaft (17) and can be introduced into the receiving chamber (14) via an opening (33), which is formed on the clamping sleeve body (13), along an insertion direction (R) of the connection screw (15), wherein the receiving space (14) has a first region (18) and a second region (19) which adjoins the first region (18), wherein the first region (18) forms a support region for the conductor (10) and the second region (19) forms a press-in region into which a subregion of the conductor (10) which is arranged in the first region (18) is pressed by means of the connection screw (15) in a connected state, wherein the second region (19) has two opposite side walls (20, 21) against which braided wires (11) of the conductor (10), which braided wires are exposed by the conductor (10) being pressed in, bear in an electrically contact-making manner in the connected state.
