Abstract (en)

[origin: WO2019193188A1] Charging station for electric energy storages of electric vehicles comprising an input circuit for connecting the charging station to an electrical power source; an output circuit for connecting the charging station via charging plugs to the electric energy storages of electric vehicles; an electrical direct current charging buffer with a positive terminal and a negative terminal configured to be charged by the electrical power source; a n-phase transformer for galvanic isolation of the input circuit from the output circuit with primary windings (L'1, L'2, L'3) on the input circuit side and secondary windings (L"1, L"2, L"3 ) on the output circuit side; a sensor for sensing at least one of voltage or current consumed during charging the electrical operated vehicle providing a sensor signal that is indicative of the sensed voltage and/or current; the output circuit further comprising a switching circuit for periodically connecting the positive terminal of the charging buffer and the negative terminal of the charging buffer to the primary windings (L'1, L'2, L'3); control means for receiving the sensor signal and configured to control the switching circuit to provide a predetermined voltage and/or charging current.
