Abstract (en)

[origin: WO2019197709A1] There are disclosed various methods, apparatuses and computer program products for audio encoding and reproduction. A method comprises determining, in a first device, parameters for at least two reverberator methods for reproducing a reverberated signal; obtaining information about capabilities of the reverberator methods to reproduce the reverberated signal; producing at least one multidimensional preference information for the reverberator methods; and transmitting the information on the reverberators, the at least one multidimensional preference and related parameters to a second device.
