Abstract (en)

Provided is a wrapping paper for a non-combustion heating-type smoking article, the wrapping paper having a colored part in which a discriminant score, which is obtained by through substitution performed in formula (1) by using color difference values in a CIELab color system between before and after the wrapping paper is heated at 230° C for 3 minutes, exhibits a numerical value lower than 0.62. Formula (1): discriminant score (y) =  $-0.18 \times \Delta L^* + 0.08 \times \Delta a^* + 0.13 \times \Delta b^* - 2.36$  (In formula (1), the color difference values in a CIELab color system between before and after heating are values obtained by subtracting pre-heating L\*, a\* and b\* values from post-heating L\*, a\* and b\* values.  $\Delta L^*$  represents the difference in lightness L\* between before and after heating the wrapping paper;  $\Delta a^*$  represents the difference in chromaticity a\* between before and after heating the wrapping paper; and  $\Delta b^*$  represents the difference in chromaticity b\* between before and after heating the wrapping paper.)
